featuring  
**Duraseal™**

**Windows built  
with Duraseal are  
worry-free windows,  
protecting you and  
your home against  
the outside elements.**

## see more **CLEARLY**

Windows that are poorly insulated allow moisture to collect in the form of condensation. Condensation can obstruct your outside view, reduce natural lighting and damage interior finishes. Moisture and condensation can also increase the risk of mold. Windows built with Duraseal warm edge spacers reduce condensation, keeping moisture off your glass for a clearer view to the outside.

## feel more **COMFORTABLE**

Regardless of the season, home comfort begins with windows built with Duraseal. On a cold, wintry day, the inside glass surface of an inefficient window will draw heat from your body leaving you to feel chilly inside your home. Windows built with Duraseal reduce this heat transfer and will improve the temperature of your inside window glass. Duraseal keeps windows warmer in the winter and cooler in the summer making your home more comfortable year round.

## save more **ENERGY**

The thermal performance of a window plays a major role in household energy conservation. A high performance window system will keep your energy costs low by reducing heat loss in the winter and heat gain in summer. Duraseal combined with Low E glass and Argon produces one of the highest performing, energy efficient window systems saving you money on your heating and cooling costs. Duraseal is an ENERGY STAR qualified product.

**To Save More Energy,  
choose windows built  
with Duraseal.**
